

# Valve Shop

**Longwall Hydraulics' valve shop facility has been in operation for 12 years and during this time we have repaired and serviced literally thousands of hydraulic control valves.**

We have also recruited and trained a highly competent staff and utilise only quality suppliers. Combine that with our in-house CNC facility and the result is a high quality product. All repairs and servicing of hydraulic valves are carried out in a "clean room" where dust, airborne particles and other foreign materials are rigorously screened.

Longwall Hydraulics has a very large stock of repaired valves that can be used on a service exchange basis which dramatically reduces the time that our customers will be without their spare valves. We can also offer our customers the service of maintaining their "float" of spare valves in a repaired condition ready to be dispatched as soon as they are needed.

Longwall Hydraulics also offers sales of new and repaired roof support hydraulic valves and solenoids for use by Australian Longwall operators. Our customer base covers both NSW and QLD and we have the capabilities of servicing both Dowval/Compac and PM4 valve gear.
